

Options in Snap Dragon

To get to the settings in Snap Dragon click Options -> Settings

This will resize the pictures at the % listed in the box. Values of 1 to 100 will apply here. This is for faster picture loading on slower computers.

This will enable debug mode, which will output data to a debug file in the local directory including speed.

This will enable the news feature when starting the program. News can also be seen from the help menu.

When searching for pictures, Snap Dragon will only collect pictures of the extensions checked here. If it isn't checked it gets ignored when finding pictures
